EPDM

**GRANULES FOR
SPORTS & LEISURE
FLOORING**

COME HOME TO DURABLE SPORTS FLOORING CONCEPTS

A premier manufacturer of rubber flooring surfaces in Saudi Arabia, we specialise in rubber solutions for a diverse range of sports surfaces.

Developed to exacting standards of international specifications, our products come in the latest designs, colours, sizes and shapes. What's more, we are eco-friendly and durable too.

SFR-FLEX are the EPDM rubber granules for first-class elastic floor coverings. Typical applications are athletic tracks and multisport surfaces, playground safety surfaces, prefabricated slabs, molded parts and rolled goods for various surfacing solutions. The granules can be processed with a one or two component polyurethane binder or coating.

Advantages of SFR-FLEX

With SFR-FLEX EPDM granules you can be certain that you are receiving an actual EPDM content of at least 20% high-quality EPDM, which means you will get long-term enjoyment from your elastic surface coverings. SFR-FLEX guarantees the exclusive use of EPDM to ensure excellent cross-linking of the granules, as well as to guarantee optimal mechanical properties and durability of the granules.

SFR-FLEX EPDM granules feature the lowest dust content on the market, resulting in a better coverage and use of less binder. This saves money in the long run!

SFR-FLEX products are tested comprehensively and inspected regularly. This allows SFR to guarantee a product that is safe for people and the environment. With SFR-FLEX there will be no surprises in the case of external tests or for fulfilling the requirements of standards!

SFR-FLEX EPDM granules have an optimal sieve curve and a low dust content. These properties allow a clean and uncomplicated installing, with lower material consumption and superior surface quality.

For colorful sports and leisure worlds the SFR-FLEX color range

Granules from SFR-FLEX high-quality, high-yield & durable

In our in-house lab we continuously research ways to improve our EPDM granules and push new product developments. That clearly sets us apart from the competition. Our products are convincing especially due to their unequalled surface area performance: Granules from SFR-FLEX have an incomparably high yield.
